Subject: August 2015 Monthly Progress Report, Techalloy

John--I have reviewed the August 2015 Monthly Progress Report for the Techalloy Facility in Union, Illinois. I have only a couple of comments.

1. We asked that water levels be taken in DGW-2I whenever downloads were done. Autumwood provided a measurement for August 31, which is good. It is my understanding they did not provide a measurement for July 28 because we did not make the request at that time. I have no issue with the lack of a starting measurement for the July event, but in future Autumwood should provide both the starting and ending measurements and provide a comparison of the field measurements and transducer data--both the absolute elevation and the change in elevation between the first and last readings. If these measurements don't agree to say 0.05 ft, we should consider remedial steps.

2. We requested some discussion of the chemical data from the pumping wells during the review of the last monthly report. At this point the review shouldn't be included in this progress report, but it probably should be included in the September Monthly Progress Report.

Feel free to call if you have any questions or comments.
